1Password

Centralize visibility and control of your SaaS apps

Trelica by 1Password

Overcome SaaS sprawl

Your organization likely relies on hundreds of SaaS applications. But how many of them do you actually know about or control? With employees adopting SaaS tools on their own and connecting to business data without IT's knowledge, your organization faces security risks, compliance gaps, and wasted spend.

Trelica by 1Password: Secure governance for the modern workplace

Trelica by 1Password helps you uncover every SaaS and AI tool in use, manage who has access, and eliminate unnecessary licenses.

As part of Extended Access Management, Trelica by 1Password

helps you eliminate SaaS blind spots and optimize your SaaS investments.

Why choose Trelica by 1Password?

How Trelica by 1Password works

Trelica by 1Password secures your SaaS environment through:

- **Discovery:** Automatically identify every app in use, whether it is approved or not
- **Automation:** Streamline onboarding, offboarding, and permission workflows
- **Optimization:** Uncover underused licenses, duplicates, and risky apps

What can you do with Trelica by 1Password?

Trelica by 1Password gives you the tools to:

- Discover shadow SaaS and unapproved AI tools
- Monitor user access to all applications and identify stale or risky permissions
- Reduce SaaS spend by consolidating duplicate tools and eliminating unused licenses
- Automate access provisioning and deprovisioning
- Enforce governance policies and generate audit-ready reports

Key Trelica by 1Password use cases

- Identify every SaaS or AI app in use across the organization
- Monitor and adjust permissions based on role or usage
- Revoke access automatically when an employee leaves
- Flag and remove risky or non-compliant apps
- Build a system of record for app access and licensing

Is Trelica by 1Password right for you?

Trelica by 1Password is best for organizations that:

- Have limited visibility into SaaS usage and costs
- Struggle with shadow IT or decentralized SaaS adoption
- Need to streamline onboarding and offboarding workflows
- Want to strengthen compliance posture and reduce audit fatigue
- Want to align SaaS spend with actual usage
