

Harmony Browse

Enable a secure, fast and private internet browsing experience

Key pitch

- Browser security is part of the SASE framework, Harmony Browse fits into that
- Protects browsers from zero-day attacks: Prevents phishing attacks, malware downloads and credential re-use
- Delivers fast and secure web access: Keeps workers productive and safe
- Enforces users' internet data privacy: Keeps users' browsing history private, complying with data privacy regulations, including GDPR

What's in it for partners

- Nurture and grow relationships with customers and Check Point
- Easy to implement
- Easy to generate revenue

Speak to

- CISO/CIO – they understand the need and own the budget
- SECURITY DIRECTOR/MANAGER – Secure users, devices, and access to the organisation and to the internet
- SECURITY ARCHITECT – Design and implement security solutions and ensure operations and reliability

Key differentiator

- Advanced technologies prevent zero-day malware downloads and block phishing sites with the market's best catch rate
- Delivers a fast web browsing experience with zero latency without re-routing traffic through the cloud for inspection
- Inspects SSL traffic within the browser without breaking SSL and hindering localisation
- Single management over different platforms and browsers
- Deployed as a nano-agent within the browser, speeding implementation and reducing management overhead

Target customers

- ALL INDUSTRIES AND SIZES – any organisation using a browser
- VERTICALS – all industries

Conversation starters

- What do you perceive as the major security risks of your remote workforce?
- How do you secure corporate and internet access of your remote workforce?
- Does your organisation's security policy allow remote access to corporate applications?
- How do you secure remote access to corporate applications?
- How do you protect remote users whilst they are browsing the internet?
- How does your company protect its employees' credentials?
