Of all Enterprises are using cloud services

84%
Of organisations are using more than one cloud service

88%
Of cloud breaches have human error due to misconfiguration

75%
Of Enterprises consider cloud security as a top priority

Regain visibility across multi- and hybrid-cloud environments

The challenge

Multi- and hybrid-cloud strategies have opened the door to **great transformational change** and it is impacting every sector, from retail, financial services, manufacturing to heavy industry. As a result of the cloud, new digital-centric businesses are also emerging that are far more agile and innovative than anything seen before. However, it has also added **significant complexity and risk for IT teams**, including lack of visibility and the need for end to end security assurance.

The solution

NETSCOUT provide a powerful combination of **service assurance, cyber security, and business intelligence** solutions that provide unmatched visibility into the **multi- and hybrid cloud** environment. Cloud visibility is provided with rich ASI from vStream virtual appliances, when deployed in combination with the nGeniusONE Service Assurance platform. All members from the IT organisation, from **NetOps to DevOps, AppOps, SecOp and CloudOps** will benefit from improved collaboration by leveraging the same automated analysis.

The products

- InfinistreamNG
- vStream
- nGeniusOne
- Omnis Security

The advantage

- Visibility and control across **all cloud services**
- Achieve comprehensive coverage of application services and vulnerabilities, with NETSCOUT on or off-premises; on bare metal, in **private or public cloud**, today and into the future.
- Greater IT productivity and vendor collaboration with visibility across all platforms for single pane of glass views and analysis for voice, data, virtualised environments, and private / public cloud
