

Database Performance Analyzer Network Automation Manager

Database Performance Analyzer (DPA)

What is SolarWinds Database Performance Analyzer (DPA)?

SolarWinds DPA pinpoints performance issues while providing expert advice with tuning advisors. Anomaly detection powered by machine learning allows DBAs to proactively optimize databases before small issues become big problems.

Why is DPA a Smart Investment for Your Team?

- Hybrid Monitoring, 24/7 Real-Time, Down to the Second
- Cross-Platform : 20+ Database Platforms, On-Prem, VM or Cloud
- On-prem/Azure/AWS implementation
- Agentless with LT 1% overhead
- Automated 24/7 alerting
- Anomaly detection powered by machine learning
- Wait-based analysis with tuning advisors
- Orion® Platform AppStack™ and PerfStack™ integration
- Best in class, integrated VM option
- Customizable reporting

Database Performance Analyzer

Deeper visibility into database performance, plus expert optimization and tuning advice. Start today with a fully functional [free trial](#) of Database Performance Analyzer.

Database Performance Analyzer Network Automation Manager

Network Automation Manager (NAM)

Integrated network automation and operations management software for on-premises, cloud, and hybrid IT environments.

Why Network Automation Manager (NAM)?

- 1) The larger and more complex the network, the greater the need for network automation and integrated operations monitoring and management. SolarWinds Network Automation Manager (NAM) is designed to cover large or complex environments with comprehensive performance, traffic, WAN, and switch port monitoring, automated change and configuration, and IP address management in a single, unified software solution.
- 2) Customer does not need to purchase additional polling engines! NAM bundle includes 100*APE's.

Network Automation Manager

Integrated network automation software for large or complex environments.
