

Why Juniper Networks?

When it comes to your network,
the status quo won't do.

Why Juniper Networks?

When it comes to your network,
the status quo won't do.

Legacy networks condemn you to the present. In this age of virtualisation, SDN- and cloud-enabled everything, you need a network that will expand your competitive edge and keep you positioned for ongoing growth and success.

That means you need a networking partner with vision. A partner that isn't afraid to challenge conventional wisdom. A partner that anticipates your needs, has the expertise required to solve your toughest problems, and helps achieve your business objectives.

Juniper Networks is such a partner. Since its inception, Juniper has consistently developed and delivered market-leading solutions and services—including routers, switches, security and software—that set the standard for how businesses connect, collaborate and communicate. Juniper is the vendor of choice for the world's leading service providers, stock exchanges, telecoms, enterprises and government agencies. Over the years, Juniper has earned its reputation as an innovator by out-engineering the competition and exceeding customers' expectations.

Transforming the economics of networking

Most small and mid-size businesses can't afford to maintain a large full-time IT staff to handle network issues. That's why so many of them choose Juniper. Its networks are simple, reliable and secure. Our engineers can help you build and operate a network that minimizes risk and delivers results so your business can succeed – today and in the future.

What enables the Juniper difference

Fueled by a significant investment in research and development, Juniper Networks has developed some of the industry's most groundbreaking innovations across every aspect of networking technology: silicon, systems, and software.

Silicon

Our Junos® One family of processors is an unprecedented integration of silicon and software that pushes network performance boundaries.

Systems

Our powerful, simplified network architecture spans the routing, switching, and security markets. We approach each architectural challenge with a fresh eye, looking at physics-related obstacles such as performance, power, reliability, cooling, and heating. Our unique perspective has enabled us to develop some of the industry's most groundbreaking network innovations across routing, switching and security, such as the Juniper Networks® Converged Supercore®, the Universal Edge, the vMX, MetaFabric™ Architecture with Contrail, and Juniper Unite for the Cloud Enabled Enterprise.

Software

Juniper Networks Junos® operating system, which is integrated across our routing, switching, and security products, is unmatched by competitors. Our Junos platform makes customer networks simpler to maintain and operate over time.

Juniper Networks facts:

The top global service providers, and 92 of the Fortune Global 100, do business with Juniper Networks.

33 of the world's 35 largest mobile network operators run on Juniper.

44 of the top 50 global financial banks and insurance companies rely on Juniper Networks.

The top five social media properties run on Juniper Networks.

Whether you're an enterprise or a service provider; whether you're building a cloud-enabled campus or deploying cloud-based customer premises equipment; whether you're looking for a hardware solution or a software solution—look no further than Juniper Networks.
