

Take Advantage of the Palo Alto Networks Dynamic Duo

Partners who combine Westcon's Proof-of-Concept (PoC) Evaluation Program with a Palo Alto Networks Security Lifecycle Review (SLR) close more deals, more quickly. It's a compelling opportunity to summarize the business and security risks your customers face while showing the strong benefits of Palo Alto Networks solutions. Westcon also offers PoC deployment and SLR tool partner trainings to help you cement your status as a Security Superhero.

Submit Your Eval Request Today!

Use Westcon's Palo Alto Networks evaluation pool to complete PoCs for your customers. You'll help them gain visibility into their traffic, understand application usage, and see threats their incumbent solution isn't stopping. Then take the experience to the next level with an SLR. The report will outline application usage, SaaS-based applications, URL traffic, content types, and all threats traversing the network.

Check Westcon's Evaluation Inventory

Security Lifecycle Review

Strict policies and solid security measures can't eliminate hidden threats in your customers' systems. Our SLR examines network traffic and then generates a comprehensive report unique to your end user's organization. You'll discover the applications and threats exposing vulnerabilities in their security posture. To get started, please contact paloaltonetworks.us@westcon.com.

For powerful support from strong allies, contact Pierce Brady, Westcon's Palo Alto Networks Product Sales Manager, at 303-222-4886 or pierce.brady@westcon.com.
