

Race ahead of the competition

Symantec's Integrated Portfolio Solutions.

IN THE SPOTLIGHT

Symantec Endpoint Protection (SEP)

#SpeedUpSecurity

More Security
for
**Less Cost &
Complexity**

Complexity is the biggest enemy of Cyber Security

Symantec's integrated approach unifies cloud and on-premises security to protect users, information, messaging and the web.

No other vendor offers a unified solution that can orchestrate a response at the endpoint that was triggered by the detection of threats across web, email, cloud and information gateways.

Partnering with
one trusted vendor means
one solution,
one contract,
one point of contact.

Less deployments, paperwork and complexity. And more cost effective than most multi-vendor solutions.

Symantec Endpoint Protection (SEP)

The most advanced endpoint security platform on the planet.

SEP coordinates threat detection and response, deception and hardening functions to give visibility and control over the endpoint environment with a single agent/ console. SEP works in conjunction with other Symantec solutions and third-party products, via open APIs.

Platform

Symantec is the world's #1 security vendor

Its portfolio offers unparalleled protection and insight to reduce risk and lower costs, from the cloud to the network to the endpoints. SEP integrates with other solutions from the Endpoint Protection family to form a multi-layered defense for on-prem, hybrid or cloud deployments.

For the Corporate User

Combine SEP with Symantec Endpoint Detection and response (EDR)

Add an additional protection layer that exposes advanced attacks with precision machine learning and global threat intelligence minimising false positives and helping ensure high levels of productivity for security teams.

Roll out EDR across Windows, macOS, and Linux devices using Symantec Endpoint Protection (SEP)-integrated EDR or a dissolvable agent.

For the Mobile User

Add Web Security Service (WSS) to your SEP deployment

Apart from allowing business to control access, protect devices and boost network performance, adding WSS can assure a secure navigation from any device. Complimenting this with CloudSoc can assure safer navigation throughout all these web applications that become increasingly business critical such as Microsoft Office 365.

For the Versatile User

Compliment SEP with Application Isolation

Adding Application Isolation to SEP, will assure that no corrupted application will interact with any device.

It auto-classifies risk levels for all endpoint applications, shields known, good applications from attackers trying to exploit application vulnerabilities and isolates any application where anomalies are detected.

For the Critical User

SEP as a part of Symantec Protection Suite Enterprise Edition

Symantec Protection Suite Enterprise Edition combines SEP, Mail Security and Messaging Gateway to protect critical users from targeted attacks, data loss or spam by applying multiple layers of protection, to laptops, desktops and servers.

Proactive technologies automatically analyse application behaviours and network communications to detect and block suspicious activities.

Integrated endpoint protection - Made easy

Additional Symantec Endpoint Protection Bundles

Advanced Endpoint Defense

- Management console
- Application control
- Application Isolation
- Threat Defence

Complete Endpoint Defense

- Management console
- Application control
- Application Isolation
- Threat Defence
- Endpoint Detection & Response
- Cloud Connect Defence
(to protect from potentially dangerous Wifi connections)

Speak to Westcon's expert to find out more about our capabilities to complement your opportunities with training, support or professional services.

Why Westcon?

Westcon is the leading global technology distributor.
We know security.
And we know Symantec.

No one is better placed to help you navigate their
portfolio, programmes and promotions.

Add Westcon's industry-leading Technical
Services and instantly increase stickiness for new
opportunities and returning customers.

Sounds good? Show me how Westcon and
Symantec can make security simple and
profitable.

DID YOU KNOW? Westcon constantly expands its vast array of Services for Symantec. Professional Services, Education Services, Supply Chain Services & Support Services - now including **Embedded Support for SEP.**

**Ready to
increase protection,
cut costs and
complexity?**

**Contact the Westcon Team
now and #SpeedUpSecurity
with Symantec.**

About Westcon-Comstor

Westcon-Comstor is a value-added technology distributor of category-leading solutions in Security, Collaboration, Networking and Data Center. We are transforming the technology supply chain through our capabilities in Cloud, Services and Global Deployment.

Westcon-Comstor extends our partners' global reach while providing the local expertise needed to successfully navigate worldwide opportunities. We combine expert technical and market knowledge with industry leading partner enablement programs.
