NETSCOUT Arbor Edge Defense and Availability Protection System Temporary Capacity Licences

To help existing customers grappling with the impacts of COVID-19 on their network usage and who are concerned about heightened DDoS exposure, we are offering a temporary increase in mitigation capacity via a modest subscription licence with a three-month minimum term. The customer simply loads the licence key on their appliance to get an instant increase in protection.

Eligibility

- Any existing (NetSuite) customer with an AED-2600/2800 or APS-2600/2800 appliance and active M&S/AIF contracts for that appliance
- (M&S/AIF contracts cannot expire prior to of end requested subscription term)

Customer purchasing requirement

- Appliance-based subscription SKUs with minimum three-month term (please note that use of EVAL licenses to address these customer needs is not sanctioned).

Customer deliverable

- Temporary increase in mitigation capacity to an AED/APS appliance a customer already owns
- Customer loads subscription licence onto their existing appliance, temporarily overriding their existing perpetual appliance licence
- Subscription licence locked to their specific appliance (S/N) and expires at end of subscription term
- Appliance subscription SKUs already include T1 M&S/AIF entitlements, capturing the incremental value the customer is receiving
