Design

Enable customers to benefit from the latest IT advances and multi-vendor integrations. Leverage our expertise to building proposals and recommend configurations across technologies, vendor solutions and deployment scenarios.

- **Solution design:** we use the latest architecture standards, guidelines and site templates to deliver the best solution designs possible
- **Consultancy:** business technology consultancy to address problem resolution, solution validation and best-solution advancement

Deploy

Services that provide resources for simple installations or complex multi-country, multi-technology deployments, delivered remotely or on customers' premises.

- **Rack and stack:** Westcon-Comstor field engineering capabilities provide onsite coverage in over 100+ countries
- **Implementations:** our team can either connect remotely or be on site at your customer's facility to execute physical or advanced implementations
- **Migrations and updates:** on-site and remote translation of settings to newer versions, or migration to new solutions with more advanced configurations

Optimise

Get more value out of IT investments by evaluating current infrastructure, optimising configurations, and leveraging advanced features. Align to new business requirements and boost security, performance, and availability for your infrastructure.

- **Health check and configuration audit:** a proactive assessment of your security infrastructure and the environment where we identify vulnerabilities, optimisation opportunities and recommendations for improvement
- **Network assessments:** a review of existing network infrastructure, its management and its performance. By analysing the design and configuration, we identify optimisation opportunities and recommendations for improvement
- **Consultancy:** best practice guidelines, assessments, upgrade and capacity advisory services to maximise return of investment for evolving business requirements
