(1) VM-Series performance will vary based on underlying virtualization infrastructure (hypervisor/cloud). Refer to the individual datasheets for detailed performance and testing information. (2) Each result in this column is for an optimum combination of PA-7000-DPC-A and PA-7000-100G-NPC-A cards populated in all available slots. (3) Adding virtual systems to the base quantity requires a separately purchased license. (4) Optical/Copper transceivers are sold separately. (5) CPU oversubscription supported with up to five instances running on a two-CPU configuration. (6) 60 GB required at initial boot. VM-Series will use 32 GB after license activation. (7) "Bring your own license" deployment option. (8) "Pay as you go" deployment option.
